COMPUTERVIEW

SIGHS of relief were audible over Putney last Friday when news came through from the Commons that there was to be a rethink of the whole basis of the proposed Inland Revenue PAYE computer system. The feeling was akin to getting keyed up to give the speech for the first time at the annual ball, only to hear that it was now to be a barbecue and no speech would be necessary after all.

As the plan stood, ICL was set up to come out the loser either way. If the contract went to a US company, ICL's standing in its foreign markets would take a serious knock, while if it won the contract, it was likely to turn out to be a poisoned chalice: a project of that scale, and one so exposed in the spotlight of parliamentary and public scrutiny, was bound to run into problems at some stage.

ICL's image has been dented by the Swansea Drivers and Vehicles Licensing Centre fiasco, even though the company did nothing apart from supply the hardware. Perhaps the strangest aspect of the case is the widely repeated statement that had the contract been given to IBM, everything in the garden would have been lovely, the system would have come in on time and worked perfectly. Has nobody in the Inland Revenue Department, the Treasury or the Department of Industry spoken to the Italians?

In Italy, the Finance Ministry began implementation of a nationwide computer system in 1971. This was to allocate a code to every taxpayer, so that it could be

Taxing time for ICL

applied to his tax return when it was entered via a terminal. It was also to handle individuals' liability to value added tax.

The system was based on Olivetti terminals and IBM 370/188 mainframes. Four years later, the project collapsed.

IBM's contract was terminated, Itelsiel, Italy's largest software and systems house was called in, and the system was completely redesigned and the IBM hardware was replaced with machines from Amdehl.

It is likely that more blame has been attached to IBM for the failure of the project than the company deserves; more relevant is that it underlines the fact that ambitious computer projects of this kind have a habit of going wrong — and if IBM had been given the Inland Revenue that would hardly constitute a guarantee of success.

The decision to send the designers back to the drawing board has been seen as one favouring ICL; the government is saying that it wants a high UK content

in the system as possible, with the maximum foreign involvement of UK companies.

Certainly terminals manufactured in Greenock, Croydon will have a high UK content, and IBM's roughs et al will claim to be UK companies of standing.

It is intended that the new studies be completed by the end of the year, when the government's single source procurement rules favouring ICL are due to run out. Particularly ironic is the fact that the new studies are likely to produce a much more decentralised system with a computer in each tax office; it is unlikely that there will be many, if any, large computers in the system. Since the single tender rules come into effect, only the requirement is for a machine of one Allen or more above, they will not apply. A government decision to give a large part of the contract to ICL will be seen as a simple following of rules laid down by the Labour government in 1968 and consistently adhered to by governments thereafter, but an overtly political act.

There is a neat way round the political problem. The computer system is sought in part to ease the difficulty of applying unexpected changes in the system to a given mass of data quickly. It seems likely that a significant and useful role could be played by a system by CAPS, the ICL content addressable store. Since no other company has such a product, the government would be in a position to give the contract to ICL without fear or favour.

LETTERS to the EDITOR

Computers can be creative

EITHER I do not understand Donald Michie's use of the terms "knowledge" and "information", or he is wrong, or both. (Privateview, CW July 24, 1980).

In 1967 I wrote a program that composed music which won a prize at the IFIP Congress the following year in Edinburgh.

The program contrived on a routine to generate pseudo-random patterns, which was used in a recursive kind of way to set parameters to drive the routine to generate values to set parameters to drive the routine to generate values, and so on.

The last round of values were passed via a tape to a computer controlled electronic

music equipment and determined the pitch, loudness, timing and tone colour of notes. I devised this mechanism, but its results were entirely surprising to me. I do not see that the information which the tunes and structures of the piece made manifest were the same information that I put into the program. Nor was it knowledge — that is what I gained from listening to the results: knowledge about the procedure. The program generated original information.

Computers can be creative.

Ideas are old hat

THIS letter from Kirk Gee (CW, July 24) introduces an apparently new piece of jargon "Open Systems Interconnection".

The jargon may be new, but the ideas, as usual, are old hat. IBM was there, over 10 years ago, with the first concepts of SNA (Systems Network Architecture). Despite criticism over the years, it appears that SNA is more than satisfied all the standards suggested in Gee's letter.

Although I would always support movements for standardisation, surely it is a little late to attempt to duplicate research that has been exhaustively performed by others.

Hants

Simple approach

YOUR correspondent Robert Worden (Letters, June 24) complains that your previous headline "Relational Databases Just Around the Corner" is misleading because it overlooks the launch eight months ago of Logica's Rapport DBMS.

From information available, Rapport seems a simple and economical approach to DBMS which is also very portable. But it cannot claim to be in the van of relational DBMS. If the headline is misleading, it should be the authors of, for example, Honeywell's Multics relational DBMS who should complain. And there are other systems

which have as many refined features, eg inquiry, which perhaps more widely needs their claims.

If those users who would like to have a relational database in their query language are "purists" who "will never use a few years for the sake of their dreams", then they will be looking for a better DBMS from Rapport.

Or maybe the John Jacob Report is "just around the corner".

DHSS approach to the problems of file security

I HAVE followed with interest Owen Henson and Norman Revell's informative series on Advanced File Design in Computer Weekly. In particular Part 14 dealing with the problems of file security. In this they describe "online input/output batch update" as a method that combines the security and performance benefits of batch processing with the facility of holding relatively up-to-date information on file. This is, in fact, the general approach adopted within the Department of Health and Social Security/Department of Employment "Nubs" computer system which provides an online service to some 600 unemployed benefit offices throughout England, Scotland and Wales, and currently handles claims to benefit from approximately 1.5 million unemployed.

In that system, however, the basic approach has been developed and extended to overcome the problems identified and the "two-bucket" arrangement replaced by a single serial file setting as an input well. The file is controlled by input/output pointers maintained by

the programs accessing it. In this way, the online process may independently service the work and write incoming data to backing store, updating the input pointer. At each time a complete block/bucket is transferred and is thus available to the batch update run. The latter similarly maintains an output pointer. By indicating its progress through the file, and by comparison with the input pointer, can establish when it has effectively "caught up".

I accept that both the basic method and the variation we have implemented suffer the disadvantages that with system responses to terminals being generated at two levels, a short time may elapse before those from the batch update program are transmitted. The balancing advantage we would claim for this approach is in the context of the National Unemployment Benefit System in that while

sufficient processing power is normally available to enable the online end batch update elements of the system to remain in step, the file provides a flexible link between these processes and confers the ability to cope with unexpected peaks in daily workloads, without affecting input from terminals.

In the event of failure in the batch update program or files, the online data collection service may be maintained.

1984 and all that

THIS week's example of the strange things people say in the media about computers was sent by G. W. Hart of Orpington, who writes:

These computers that are supposed to be at the heart of the modern world are said to be a sort of "black box" in which the user puts in a question and the computer gives him an answer. This is a very simple way of looking at it, but it is not the whole story. The computer is a very complex machine, and it is not always clear what it is doing. It is a machine that can do many things, but it is not always clear what it is doing. It is a machine that can do many things, but it is not always clear what it is doing.

Two Pi quits race, leaving a clear field for Elbit

Two Pi has finally acknowledged that it is out of the race to provide the basis of Nixdorf's entry into the medium-scale IBM-compatible systems market, leaving the field clear for Elbit. It appears that one sticking point in the Nixdorf-Two Pi talks was that Nixdorf wanted to build some of the systems in West Germany — something Elbit had already conceded in principle, provided the terms were right (CW, July 3).

Two Pi is reported to have shipped over 100 of its AMD 2801 based V32 processors, the majority to National CBS which sells them on as the NCBS 3200 with proprietary operating software. Two Pi is still looking for a single vendor for its systems throughout Europe.

Meanwhile in the UK, Elbit has launched a new version of its DS 2000 VDU, which features the full extended APL character set as a switchable option.

The APL version of the VDU was developed by an Elbit engineer in Haifa, and pressure from the UK managing director and sales manager when they happened to spot it on a visit to Israel persuaded the parent to assign high priority to the project.

Showing that response times can be commendably short at Elbit, the display is on the UK market only two months later.

The new DS 2000 APL terminal from Elbit. The DS 2000 VDU will also form the basis of an Elbit microcomputer, due for launch shortly.

BASF competes Hitachi deal—St Gobain, Olivetti to join forces?

AFTER clinching a deal to sell the Hitachi M-170 processor in Europe (CW, July 3), BASF has now signed an agreement covering the biggest IBM compatible Hitachi machines, the M-180 and M-200H, the latter with a rating of about eight million instructions per second in its single processor form.

Meanwhile Olivetti has denied reports that it may be killing Olivetti Computers, the division that sells the big Hitachi machines in competition with BASF as well as with IBM itself.

Unchanged

Olivetti in the UK said that there was "no foundation" to the reports, while an Olivetti spokeswoman at Ivrea in Italy said that the story in the Italian newspaper from which the reports originated was "typical of Italian journalists". She added that the plan for an Olivetti Computers office in the UK by the end of this year was unchanged.

St Gobain Pont-a-Mousson, the huge French industrial conglomerate that took a 20% share of Olivetti earlier this year, has its own plans to sell Hitachi machines in Europe (CW, August 7) and a merger of its own planned Hitachi marketing operation and Olivetti Computers could be on the cards. St Gobain has a lot more money to put into new ventures than Olivetti.

Olivetti's reluctance to say when Olivetti Computers will open offices in France is a possible indication of behind-the-scenes negotiations with St Gobain. There has also been no definite promise of any office in West Germany although this may be the result of the deal between Hitachi and BASF.

Hitachi's M-170 processor is the basis of the new Hitachi M-180 and M-200H machines. The M-170 is a single processor unit, while the M-180 and M-200H are multi-processor units.

TOPS scheme to convert operators into programmers

COURSE under the Men-ber Services Commission's TOPS scheme to convert computer operators into programmers is to start for the first time in October, run by Allen Morris and Associates in Harrogate.

The students' previous computer experience will enable them to complete the course in just eight weeks instead of 18 as with the current TOPS programming course, and there will be no period of working on a computer site.

Cobol and Basic are the languages to be taught. D'Morris is appointing a full-time placement officer, and in the view of Ron Humphal of the company, graduates of this course should have good job prospects through the combination of their training and their experience.

Memories are short
IBM's memory limitations have been a major factor in the company's decision to launch the TOPS scheme. The company has announced in the US that some 80% of its TOPS graduates will be shipped with IBM memory chips rather than the 32K devices originally planned.

After the company announced that it was launching the TOPS scheme, it was reported that the company was planning to launch a new TOPS scheme in the UK.

Czechoslovakia to get first ICL 2860 in East
THE first ICL 2860 in Eastern Europe is going to the Institute of Physical Metallurgy in Brno, Czechoslovakia. Worth £1 million, the system will be used for research applications and other industrial tasks.

The system will run under the emerging VME/ix operating system.

£30,000 grant to aid computer teaching

AN information service for schools to help in their teaching about computers is to be set up by Microcomputer Users in Secondary Education with a grant of about £30,000 from the Department of Education's micro education fund.

A teacher is to be appointed full-time to man the service, and research assistants' posts are also to be set up to extend MUSE's software library and promote software transfer between schools.

This is the second injection of money in the DES £9 million programme, the first being a teacher training project in the West Midlands (CW, July 31). Owing to the Department's hudgeting schedules, some of the money has had to be spent in advance of the appointment of the programme director, which is expected in the autumn.

Attacked
The information service will probably be based at a school in Birmingham and will be run by one seconded teacher and a secretary.

The DES has replied that the committee was never intended to be representative, and needed to be kept small.

secretary. Inquiries from schools on such matters as how to start up computer courses will be dealt with, and fact and information sheets will be compiled.

The DES' choice of members for the national programme advisory committee (CW, July 31) has been attacked by the National Union of Teachers as "unrepresentative". The union has complained to Education Secretary Mark Carleton that while there are two teachers from independent schools on the committee, there is no state school teacher. There will be no understanding of the problems faced by state schools, particularly those that are less academically oriented, a spokesman said.

There is an officer from the Inner London Education Authority on the committee, Derek Esterson, but he is not a practising teacher, the union points out.

The DES has replied that the committee was never intended to be representative, and needed to be kept small.

Now there's a better VDU for Honeywell systems

And you can have it sooner

It's Data Logic's PTS 100 and it's available on three months delivery. Your operators will prefer its 15" green phosphor display. And they'll be more effective, thanks to the better layout of our keyboard and the user-programmable function keys.

The PTS 100 supports large clusters and a variety of printers up to 600 lpm, which can be mixed on a single system. As a bonus, ICL, IBM and Univac protocols are also supported.

The PTS 100 comes from Raytheon, the world's largest manufacturer of plug-compatible terminals. Data Logic provides fast field service nationwide from 19 UK locations. So you can rely on the better VDU and us, totally.

Call or write for a demonstration. We know you'll be convinced.

A Raytheon Company

She'll be into

PAGE SIX, our weekly spot for programmers and analysts, this week hands over to a guest writer, MICHAEL JAMES, from Stoke-on-

Trent. In an article based on his own experience as he has tried to find a suitable job in computing, rather than wait for a TOPS course, he takes a

lampooning look at the industry... but says that his style could perhaps owe more to Jonathan Swift than to Lewis Carroll.

Alistair's Adventures in Computer Land.....

Of course the big problem for employers is interviewing potential recruits. In computer sales a successful salesman will find himself suddenly promoted to Northern regional sales manager and booked on a management course in three months' time. Indeed it could be a waste of time for Alistair to attend a seminar on job hunting, as these always assume the interviewer knows how to interview. How can the candidates use any interview technique when the manager cannot interview?

Alistair believes that the sales side has an overpreoccupation with "management" and status. Job adverts not only offer Brobdingnagian earnings, but also virtually immediate management prospects. Compare this with the doctors in the Health Service: a house officer, either goes into general practice or rises to become a registrar, then a consultant, with a few going into administration. There is nothing magic about management — there is no way that Alistair can rate a regional medical officer of health as being a "better" doctor than one who performs a kidney or heart transplant.

LIKE A WOLF ON THE FOLD

Others might have their own ratings, but in a hierarchical sequence of usefulness and contribution to society, Alistair would have his computer agency personnel first on board that spaceship, even ahead of estate agents and solicitors — they'd need to be so that they could find the right jobs for the other people!

The teaching profession is very well organised with job vacancies being advertised in certain newspapers and journals. Candidates apply directly and the schools and colleges interview and make their choice. A simple system that works well without any agencies. Alistair has visions of the computer agencies descending like a wolf on the fold and their adverts requiring "minimum two years' experience of Shakespeare or Chaucer under comprehensive operating system".

In Britain, 53% of jobs are filled by direct advertisement, around 25% by direct application and approximately 22% by job agencies. Not so the computing industry, despite the general high level of personnel. Alistair hopes that one day a computer company will develop a system that is intelligent enough to find the right people for the right jobs, rather than the current state of affairs where the money that is currently squandered on computer agencies.

then being immediately "promoted" into administration... Alistair would go for several interviews with suitable companies in the regulation uniform of loud suit, revolting shirt and nauseous tie that sends children clutching at their mothers' skirts, but meats with the general approval of sales managers. After these interviews, Alistair would find that the commercial mind salesman would fall into two categories, the posers and the incredible Huike. The poser company will have city centre prestige offices with the reception area full of gigantic rubber plants and exuberant greenery more in keeping with a Tarzan film set. A super secretary will ask Alistair if he would like a coffee and "how he takes his coffee" because instead of speaking English, everyone speaks in a mid-Atlantic accent using a Muppet-like speechform.

While Alistair drinks his coffee, he can watch the salesman "hard" at work moving smoothly from one posed position to another — just like the local trendy disco! Naturally, Alistair would have a super interview with the super sales manager and everything would be really tremendous.

Contrast this with the offices of the Incredible Huike. These will be situated just off the city centre with one smart room for holding customer demonstrations, while the offices are in a semi-qualor to keep down overheads. While a thick skinned tenacity is important, the

PUZZLER

THIS little "double-whiff" dissection puzzle is completely separate from the one in the last issue. It is a 3x3 grid of squares. The top row has three solid black squares. The middle row has a solid black square on the left, a square with a white cross in the center, and a solid black square on the right. The bottom row has three solid black squares. The puzzle is to cut the grid into two pieces that can be rearranged to form a 5x5 square. The pieces are: a 3x3 square of solid black squares, and a 2x2 square of solid black squares with a white cross in the center.

essential requirement for success is to conform to the incredible Hulk stereotype — 1950's unliberal MCP mele, on-quota weekly consumption of n plints of bitter, n bottles of whisky and at least three women, plus games of poker for very high stakes. Alistair might lose all of his hard earned commission but at least he'll be one of the boys...

Alistair, though, doesn't really want to be in commercial sales as he likes an intellectual challenge. He'd love the computer time to calculate how long it would take six monkeys to create Homlet using six typewriters and compare this with the creativity time of six word processor salesmen and their machines. Would the monkeys win?

ETERNAL DAMNATION

Alistair would also like to go for interviews as a programmer or analyst but doesn't have the necessary one-year experience. Several people have suggested that there are certain numbers that remain constant through time and space, which will provide the answers to the hidden secrets of the universe. Alistair believes that the key number is one, the galaxy being an integer entity that has no room for 0.5 or 0.75. Woe betide any manager rash enough to employ a person without this one year's experience as this will determine an eternity of damnation hung up in some minor subroutine loop of that great computer in the sky...

Naturally Alistair would like to have a happy ending to the story, with the PER coming to the rescue at the last minute with a TOPS course in systems analysis and everyone living happily ever after. Alas, although Alistair has passed his aptitude test and interview, there is a huge backlog of people waiting to attend.

But for you readers who have read this far, do not despair. In his travels across Computer Land, Alistair has found one or two real companies in this unreal land and success, like the computer you needed yesterday, has had its delivery time postponed.

SOFTWARE FILE

For £100 Zilog MCZ-1 users can use CP/M

FOR about £100, users of Zilog's MCZ-1 microcomputers systems can run CP/M, the widely used operating system developed by Digital Research.

The MCZ-1s will need hard-sectored diskettes, which involves a hardware modification but will still allow MCZ-1s to run Zilog's own more powerful Rio operating system.

Although Zilog already has a large resource of commercial systems for the MCZ-1, CP/M's popularity will make accessible to users much applications software which has been developed to run with the operating system.

CP/M's popularity is mostly based on ease of use, and Zilog has adopted it on the basis of "if you can't beat 'em join 'em" rather than because of any deficiency in Rio. For existing systems a retrofit of the hardware adaptation will be available for £50.

SOFT BITS

Printing boost for ICL users

A PRODUCT developed in-house by Safe Computing to improve its own printing capability under ICL's George 2 operating system has been made available to all ICL users.

The product, G-TOM, enables the transfer of print files between 1900, VME and DME environments, allowing archiving on magnetic tape, at a cost of £1,000.

ACCORDING to Fujitsu's Internal news service, the Japanese electronics industry is increasingly interested in leasing software products as a way to increase hardware sales. Leasing of software has lagged behind computer leasing which accounts for 30% of all total lease transactions in Japan.

FRENCH software products firm Sigos has released the 61st version of its general accounting package Gae 3 for IBM's 43xx series, having already adapted the programs to VSAM access.

US parent of APL Plus, STSC, formerly Scientific Time Sharing Corp, has announced record turnover and net profit for its fiscal year ending in May 1980, of \$21,101,000, an increase of 27% over 1979's figures.

A 16-BIT microcomputer implementation of business Basic is offered by Sentinel Computers for its range of small business computer systems based on the Intel 8086.

ANAGRAM SYSTEMS of Hove, Sussex has a sales leader and invoice printing package for Commodore Pet users. The system is mostly written in 6502 machine code and consists of 70 modules which require a 32K Pet, dual drive floppy disc and 80 column printer. It costs £320 plus VAT.

ADR plans to integrate its products

US software firm ADR has announced an integration of its software products into "functional application areas", so that products such as Librarian and Data Dictionary are grouped under Resource Control, and Roscoe and Volle under Office Program Development.

According to ADR's managing director Nick Pollard the idea is to make substantial increases in sales by selling an integrated software system, the advantage to the customer being "a single source for his software solutions".

ADR's products are also sold by CYP in the UK, which also has the range with the UK subsidiary which was fully established this year.

Digico adopts development tool

DIGICO is to adopt, as standard, software produced by a team under the name of the Versal Program Development and Maintenance Suite which has just had its price cut from £1,250 to £200.

Formerly known as Editor Suite, the set of programs allows users to turn Digico's Basic into a comprehensive development tool.

The suite handles standard functions, replacing many that consuming procedures with a one-line call. The library has 48 functions which include page and data calculation and page handling as well as more unusual features such as a universal graphics generator, a histogram generator and a cheque generation facility.

The price was reduced to keep it in line with falling hardware costs and to bring the suite within the reach of multi-user Co-author Bob Sims says it will be supplied free to hospitals.

Ansi backs blanks

THE Ansi Forum's X3J3 has voted to support a significant "in Fortran" standard. The proposal, said: "The special blank is a meaningful statement symbol and must be separated from other by at least one special character".

Macro tool could boost productivity

A MACRO based tool that is said to beat similar ICL products by cutting system development and operational costs as well as minimising machine overheads, has been launched by Forward Computing of Birmingham.

Co-developer Melvyn Morris said the tool, called Macro Expansion Language, could be applied to most languages and in ICL's case this was from Cobol to JCL.

"Comparable products such as ICL's DDS and Daskill's SuperCobol, formerly Cobra are competing with one another by covering the same area. Neither is as good as the facilities we can supply involving a single pre-processor," Morris added.

Potential

Years of ICL 2903/4, 2990 DME/3 and ME29 equipment could avoid investing in such extras as George 2, Maximop, and Exec by applying the MEL principle, said Morris, and there was potential for improving performance on existing systems such as Telecomputing's TFS.

On the operations side, MEL is said to reduce George/JCL tasks into one-line commands to run a program using only the program name, which generate all necessary JCL code. In online JCL development MEL can increase the levels of macro nesting allowed under George 2 from one to 64 and, in job submission, the parameters of a job can automatically be checked before execution.

Reduction

Applied in Cobol program development, the use of the macro principle can mean a vast reduction in time spent coding the Data Division, and free the

programmer from routine tasks such as checking the condition of a file in the Procedure Division. The Identification Division can also be generated as far as "Special Names" by one statement of the program name.

The MEL application is also said to allow analysts to design files via a VDU. Hard copy documentation is then automatically produced, "fleshing out" the design.

All the commands concerning files — Select/Assign, I/O control, FD file descriptions — can then be bypassed, by the programmer using a single line declaring the file name.

In-house standards such as a unique file prefix to each variable name can be taken care of in the generated code.

Other programming shortcuts provided by MEL techniques include generators for tests usually done on 88 Level switches, allowing one-line tests such as "IF FILE FULL", case PERFORMs and GOTOs, and the facility to insert generated code into a program by means of an in-line DO instruction.

Morris developed the Macro Expansion Language with Dermot O'Loughlin, having decided after eight years of programming that certain repetitive Cobol tasks were "a pain" and deserved elimination.

Removing

"All the restrictions we're removing are the parts of Cobol which actually obstruct the programmer in his real task of problem solving."

When asked about the use of Copybooks for such macro tasks, Morris explained that MEL had a "measure of intelligence", not the heuristic kind, by which macros could com-

municate and follow judgment paths. Also code could appear where it is most relevant, for instance the Working Storage section which relates to a procedure module can appear above the module on a listing.

Future plans

Forward Computing's Birmingham bureau has been running MEL facilities for six months, and is now offering them at prices varying from £5,000 to £15,000. ICL users already interested include the Severn Trent Water Authority and Lever Bros of Nigeria.

Forward Computing's new products division, a Richard Costain subsidiary, is planning further products based on MEL in the future.

Low cost way to select applications

USERS of IBM 3270 terminals are being offered a software package by Memorex which will enable them to select applications in any CPU without involving further hardware and software from IBM.

The Terminal Initiated Application Switching package, TIAS II, is designed for the Memorex 1380 Intelligent front end communications system and supports a range of multi-point 3270 systems.

It enables the terminal user to select or switch between applications such as TSO, IMS or CMS without operator intervention on transmission lines.

APL courses

DUE to demand, APL specialists Cocking and Drury is to run extra courses on APL during the autumn. The fundamental course costs £250 to £2,300.

IBM compatible RPG II for micros

AN IBM-compatible microcomputer based compiler for the programming language RPG II, claimed to be the first of its kind, has been launched by Comart of Cambridgeshire for the Cromemco range of microcomputer systems.

Said to be a full and fast implementation of the language based on the IBM System 3 version, it is designed to run on any Cromemco with a minimum of 64K-bytes of memory. The price of £350 plus VAT includes the CDOS operating system, editors and documentation.

Concise

RPG II Report Program Generator is a business oriented language which is said to be concise, easy to learn and highly productive within its sphere of creating and maintaining files as well as reporting on data.

It also has a range of advanced commands for more complex applications and is claimed by partisans to be as powerful and manoeuvrable as Cobol, but more manoeuvrable. IBM chose its name, RPG II, as the main language for System 38, now joined by Cobol (Software File, August 7).

Unix marketed as Xenix

THE time sharing operating system Unix is to be enhanced and marketed under the name Xenix by micro specialists Microsoft, following an agreement with Unix owners Western Electric.

The agreement forms the basis of a bid by Microsoft to establish Xenix as the standard operating system for 16-bit small computers in the 1980s. Charges will be based on volume and number of users per CPU.

PEOPLE and EVENTS

Office Technology recruits from ICL, IBM

Office Technology, the new sister company to Computer Technology, has recruited its senior management team entirely from ICL and IBM.

John Holmes joins as programming manager, having worked for IBM Harlow for 13 years. Engineering manager is Peter Shepherd, whose past experience includes five years at IBM Harlow and four years with the Post Office at Dulwich Hill.

Office Technology's manager of product marketing strategy is Bob Remington, who joins from the US. Remington is a psychologist who formerly worked in the IBM Office Products Division at Lexington.

Managing director of Office Technology, Robert (Spud) Taylor, was previously vice-president of ICL American operations, and director of product introduction. He described the recruitment of the management team from IBM and ICL as "unique".

Office Technology expects to announce its initial product, aimed at the word processing market, at the end of 1981.

Restructuring at Roxburgh

Roxburgh Electronics has restructured the company organisation. To cope with growth in both component and data recording activity, two separate companies have been formed.

Roxburgh Printers will be headed by director and general manager Michael Davis.

Roxburgh Switches will be headed by Michael Coverdale as general manager. Roxburgh Electronics will remain a holding company with the major shareholding in both new companies.

Bill Ling has been appointed sales and marketing manager for the computer peripherals group, which operates within the Data Recording Products group of 3M. He will continue to work as national sales manager, handling the OEM and instrumentation markets for 3M, in addition to his new duties.

Gary Mason has been promoted within Centronics from special accounts manager for the UK subsidiary to sales manager, new territories. He will be dealing with the Middle East, European Communist Countries and Africa.

Don Richards, formerly of IBM where he was service planning representative at Harlow, has joined Magnuson as software manager. Terry Rees has become area sales manager with Magnuson; formerly he was business development manager with Univac. Bob Gridley has joined Magnuson as sales engineer. Gridley was previously an account engineer with ICL and Blyth was also with ICL working on the Advanced Systems Project. Lorna Robertson comes to Magnuson as personnel administrator.

Stan Smith and Clive Rowe have been promoted at TDS. Smith is now sales engineer for the south, and Rowe to sales engineer for graphics products in the Midlands.

Damon Muir has joined CMC as branch manager for the North and East Home Counties. Previously he was a sales manager with Olivetti.

Ken Pearson is Midlands district sales manager of Svenska International. He has been promoted from Midlands sales supervisor.

William Vall has been named as vice-president of finance and administration of Softech in the US. He was previously controller at the Electro-Optics Centre of Honeywell in Lexington, Massachusetts.

New management team for Office Technology are (left to right): Peter Shepherd, engineering manager; John Holmes, programming manager; manager; and Bob Remington, manager of product marketing strategy. The company is based at Winchester.

Barry Roberts is manager, international field marketing operations, of Rediffon Computers. Previously he was control accounts regional manager. Dr David Evans has been appointed as a director for Rediffon Computers and Rediffon CMC Europe BV. Dr Evans is chairman and president of Evans and Sutherland Computer Corp of Salt Lake City, Utah and was previously Professor of Computer Science and Electrical Engineering at the University of California, Berkeley.

Walter Brandt is Central European sales manager for American Microsystems, Europe, based in Munich. He was formerly microprocessor and systems sales manager for Germany and Austria with National Semiconductor.

Leonard van Geest

LEONARD VAN GEEST, director of Gasec Computer Services, has died at the age of 88. He formed Gasec Industries with his brother John in 1938.

Vic Lana has been appointed computer technical adviser to the Government of the Bahamas, as part of the United Nations development programme. Lane is currently head of the management information centre at North-East London Polytechnic.

Helmut Kahl has been promoted to marketing director for major accounts and distributors in Europe at Dataproducts International.

Tony Plummer has been appointed consultant relations manager at Honeywell. He joined Honeywell in 1968, after working as branch manager for the custom services division of Signs (now Xerox) Systems. Alan Cowan has been appointed manager of PA's Software support unit. He was previously PA's personnel manager.

Liveness File

Take some professional advice.

Verbatim flexible discs and tape cartridges are used and recommended by computer professionals world wide. A full development programme in association with leading manufacturers ensures top quality and we provide unrivalled price and availability. For the full range of magnetic media from Willis see our catalogue. Phone Bishops Stortford (0279) 506491 or send coupon.

WHY DO THOSE IN POWER KEEP MAKING THE WRONG DECISIONS? CAN COMPUTERS HELP THEM MAKE THE RIGHT ONES? OR WOULD MORE TECHNOLOGY SIMPLY MAKE MATTERS WORSE? THESE WERE THE QUESTIONS TACKLED BY A DISTINGUISHED TEAM OF THINKERS AT SPERRY UNIVAC'S SYMPOSIUM IN MICE. RORY JOHNSTON REPORTS

Human beings 'nearing the biological limits of their ability to absorb technical change'

THERE is an increasing feeling that the world is running away with itself. Galloping technical change, planning disasters, environmental disasters, frustration with bureaucracy all combine to produce a feeling that the control which human beings have over their collective future is dwindling away. So it makes sense to examine the ways decisions are made in government and business, and to this end Sperry Univac UK gathered a distinguished group of people from government, the universities, and business for a symposium in Mice. Added to the general theme was the general question, "Can Information Technology help?"

There was little disagreement that decision making was in a sorry state at the moment. Charles Reed of the Inter-Bank Research Organisation described present-day planners and system designers as "drunks riding bicycles in a thick fog".

Heinz Wolff, a bio-medical engineer with the Medical Research Council, suggested that human beings were beginning to reach the biological limits of their ability to absorb technical change.

servants had any concept of information as a commodity or vital raw material.

Atkinson also asked whether better information would necessarily lead to better decisions, a point echoed by Heinz Wolff. But Wolff was basically enthusiastic about technology, suggesting that it could be organised to present information to decision-makers in a much more digestible way than at present. As an example he described his idea of using polar co-ordinates on a screen for displaying variable data, such as a hospital patient's blood pressure, heart rate, and temperature. Any variations would instantly be visible as a change in shape of the figure on the screen. This could be applied to any other sorts of information such as financial data.

Influenced In considering decisions the symposium inevitably came round to questioning the objectives held by decision makers. Politicians, it was suggested, are concerned with policy and not with management and are too easily influenced by who does best in a debate. Officials, on the other hand, judge their actions by whether the rules have been followed rather than by the bottom line.

Charles Reed was insistent

CHAPMAN: Corrupt civil servants would steal less than they waste now.

that it should be possible to have non-quantifiable objectives, pointing to the voluminous EEC regulations on apples that in no way deal with whether the apples taste good. Information technology on the other hand

could not possibly read in to it. Contrasting Chapman, the civil servant, present claimed that freedom of information in such countries as Sweden was a sham and that the advantage of secrecy was that it allowed a strenuous debate within government before decisions were taken without those involved having to worry that they were giving the Opposition ammunition. It was also remarked how lucky we were in Britain to have a relatively incorrupt Civil Service.

To this Chapman replied, "If

READ: Attacking the false god of efficiency.

leads to over-emphasising the measurable at the expense of the non-measurable.

Martin Shubik of Yale University remarked that the US Defence Department's strategic thinking was based on the hardware that existed rather than the other way round.

Frank Davidson of the Massachusetts Institute of Technology agreed, opining "Invention is now the mother of necessity". He pointed to the claim that PERT techniques, far from saving money on which they were first used, actually added \$1 billion to the cost. Yet the public assumed that PERT was successful and was frantically trying to apply it to lots of other projects. "The answer," Davidson said, "does not lie in methodology."

Too much power

A public survey had been commissioned for the symposium from National Opinion Polls. Two thousand adults had been asked for their views on where power in Britain lies and how life could be improved if the decision-making structure was changed. Trade unions and oil shacks came at the top of the list of those thought to have too much power, with MPs very low.

Of those asked, 40% thought that life would be made worse if there were more computers in the UK; and 33% thought it would be made better. Inevitably the issue of open government arose at the symposium, championed by Leslie Chapman, who asserted that it was to a large extent the absence of hard facts and information which enabled officials to make elected representatives ineffective. At the same time he described how, as a director of London Transport, he was swamped with vast quantities of paper for approval which he could not possibly read in to it.

Contrasting Chapman, the civil servant, present claimed that freedom of information in such countries as Sweden was a sham and that the advantage of secrecy was that it allowed a strenuous debate within government before decisions were taken without those involved having to worry that they were giving the Opposition ammunition. It was also remarked how lucky we were in Britain to have a relatively incorrupt Civil Service.

To this Chapman replied, "If

they were corrupt they would steal much less than they waste now."

Failures in recent decision-making provided plenty of food for thought. Frank Davidson was invited with the North East Corridor Project to build a fast rail system between Washington and Boston. This had been cancelled because it was assumed that new technology would soon supersede the railways, a totally unjustified view as could now be seen.

"Future Shock" has been exaggerated," Davidson said, "In many areas we need more change than we have at present, not less."

Charles Reed put a different slant on the proceedings, attacking the "false god of efficiency," and claiming that cost-benefit analyses were "all cost and no benefit." We should automate the Black Economy, using viewdata to promote better and circumvent the tax man (and incidentally the banks).

DAVIDSON: The answer does not lie in methodology.

People would be motivated to have their cards updated as various services would not be obtainable without the card. For instance, the card would be your

Each of the eight axes of Heinz Wolff's polar display represents a different variable. Normal values produce a circle, and any deviation from the norm produces an instantly recognizable distortion in shape.

'Carry all your personal data on a card' idea

PRIVACY as an issue arose several times at the Sperry Univac symposium, prompting Heinz Wolff to suggest that a solution would be to abolish central files altogether. Instead, every citizen would carry a machine-readable card around bearing all his personal data: bank statements, car tax record, educational qualifications, TV licence payments. This Wolff called "The Labelled Society."

Such a scheme was already in use in Chinese hospitals, Wolff stated, where individuals were responsible for keeping their own medical records. The effect was that there was no way other people could pry into personal data.

People would be motivated to have their cards updated as various services would not be obtainable without the card. For instance, the card would be your

car key and the car would not start if the road tax was unpaid. There would have to be a central repository of duplicate cards to replace those lost. This led others to suggest that Wolff's idea was basically sound, since it would always be possible for unscrupulous people to obtain personal data from this central

bank. Wolff and Richard Gregory, a physiologist from Bristol University, proposed a novel application for computers in assisting invention. Many developments were held up for years by a "missing link" in technology. For instance, jet engines needed a heat-resistant metal for their turbine blades, and magnetic sound recording needed a medium. A computer databank for problems looking for solutions could be fed with new developments as they came along.

BASF EDP's FAST MOVER

IBM 'not to proceed with 8100 as it is' prediction

AFTER declining in 1979, sales of the Syta business system by Computer Automation have picked up considerably, mainly due to direct export sales.

Syfa is offered primarily to IBM users as a more powerful and flexible alternative to the IBM 8100 described processing system and a key feature is full support of the IBM's Systems Network Architecture.

Two big IBM users in the UK that have opted for Syfa in preference to IBM kit are Tesco and Rossmore Macintosh.

George Dashiell, vice-president of the firm's Commercial Systems Division, doubts if the IBM 8100 will ever be installed in large numbers. "I suspect IBM will not proceed with the 8100 as it is," he remarked. "I think it will be superseded by a very small 4300 machine."

He does not see the software compatibility between such a machine and the host IBM mainframes as making Syfa a less attractive alternative.

Dashiell is also unconcerned about IBM making changes to SNA that could render Syfa obsolete. "A change in SNA would harm IBM more than Computer Automation. A radical change to SNA would be devastating for users and IBM would only do it if it were terribly hurt by Syfa. But to IBM Computer Automation is no more than a mosquito bite."

"Computer Automation's biggest challenge in the US has been building a marketing organisation for Syfa. If IBM had had a system like Syfa it would have sold 150,000 units by now. We need to be a centralised project oriented company but we are now setting up district sales offices throughout the US and have completely changed our marketing management."

Despite this decentralisation, it will continue to be interested only in selling Syfa to customers wanting at least five units. The early orders were for considerably more than five.

METHVEN: "I like the OEM business and I don't mind people thinking that it's cruddy and unglamorous. We keep on growing..."

David Methven, president of Computer Automation, founded the company in 1967 after leaving the Southern California firm Decision Control, shortly after it was acquired by Verlen Associates and renamed Verlen Data Machines.

According to Methven, the Verlen takeover put an end to expectations that he and several of his colleagues had of getting shares in Decision Control. So they quit.

Methven is an engineer by profession and at Decision Control was in charge of the development project that produced

the 620i machine that Verlen sold for several years. Verlen Data Machines was bought by Univac in 1977.

The history of Computer Automation has closely followed the development of the OEM business and the firm is probably best known for its Naked Mini family of low cost OEM machines. But, in the last few years, Computer Automation has also been active in the end user market with its Syfa business system.

Here, KEITH JONES talks to David Methven about Computer Automation's recovery after a bad patch.

Naked Mini firm is on way up again

LOOKING back on a financially grim 1979 fiscal year, Computer Automation president David Methven listed several causes for the firm's \$4.2 million loss.

According to Methven, it outgrew its existing financial control procedures, there were problems with the control of the firm's Naked Mini manufacturing operation and customer accounting was what Methven described as "inadequate". On

top of all that, it was heavily overstocked.

Methven commented: "Our inventories are still far too big. We have enough for a year when there should be enough for four months. But we are working on getting inventories down."

At the same time Computer Automation's debt is also being reduced at a respectable pace. According to Methven the firm's financial plan called for the debt to be reduced to \$12 million by the end of June and it was already down to \$10 million by the beginning of May. But Computer Automation's interest payments were still running at a painful \$2½ million a year, a situation Methven found "particularly galling."

On the brighter side Methven pointed out that interest rates in the US were now falling and he expressed optimism about Computer Automation's 1980 results.

He was unable to make any firm comment about predictions that the company would achieve net profits of \$4.7 million on a turnover of about \$80 million, although he agreed that the turnover prediction was about correct.

To some extent, Computer Automation has been a classic example of an entrepreneur-run company. But so were Digital Equipment, Data General and Hewlett-Packard and they all succeeded.

The predictions were made by computer industry analyst Faith Griffin of Rothschild, Unterberg, Towbin of New York, who gathers her information from Computer Automation's customers and financial personnel.

While factors like interest rates are largely out of the company's control, measures have quite clearly been taken where possible to improve Computer Automation's performance, including a management shake-up. In which a number of heads rolled.

Commenting generally on Computer Automation's performance over the last 10 years, Methven said: "To some extent Computer Automation has been a classic example of an entrepreneur-run company. But so were Digital Equipment, Data General and Hewlett-Packard and they all succeeded."

Methven believed the reason for Computer Automation's last impressive growth over the last decade compared with competitors like Data General was the fact that it did not go public until 1972.

According to Methven, Computer Automation tried to go public in 1970 but was thwarted by a stock market slump at that time. He remarks that the new worth of Computer Automation was only \$400,000 which looked very bad when it was trying to sell for \$5 million worth of OEM kit.

Methven stressed that the Naked Mini division, Computer Automation's OEM minicomputer operation, was still the basis of his business. It still accounted for about 65% of sales and supplied a 400-strong line up of customers, none of whom provided more than \$4 million worth of business. So the division did not depend on one or two big customers for its survival.

He commented: "I like the OEM business and I don't mind people thinking that it's cruddy and unglamorous. We keep on growing despite competition from Digital Equipment or Data General."

"Moreover, our Commercial Systems and Industrial Products divisions would not exist without the Naked Mini."

Here he was referring to the operation that builds and sells the Syfa commercial system aimed at end users, particularly IBM users, and to the division that manufactures its automatic test systems which have seen a

increase in sales of about 4% over the last year.

According to Methven, all Computer Automation's exports are eventually to be made at its Elms plant.

"We chose Elms primarily because of the tax benefits rather than its membership of the EEC, which was not crucial. We could have gone to Puerto Rico. We employ about 100 people in Ireland at the moment and our plan is to expand the workforce to 600 or 800," he explained.

Computer Automation also has a small factory in Bombay, located in the Santa Cruz Electronic Export Processing Zone, otherwise known as SEEPZ.

SEEPZ was set up for firms that export 100% of their products and offers attractions like easy Customs clearance and very favourable factory rents.

But the biggest attraction for firms from the so-called 'developed world' must be the cheapness of the labour.

A big thorn in Computer Automation's side at the moment is the investigation by the US Securities and Exchange Commission. Methven put up for sale 18,000 of his own shares in the company during the 1979 fiscal year and the commission is investigating the possibility that he sold at a price that the company was going to make a loss that year.

This is the second investigation of this sort by the commission. The first happened in 1974 when the firm's sales were \$10 million and it was expected to make a profit of \$1 million.

Returning to the commission's investigation of the 1979 fiscal year, Methven said that the investigation was not long after Methven had sold some shares. The investigation was ended after Methven was questioned under oath.

INDIAN SCENE

Software company set to move into West Europe

COMPUTRONICS, the Indian software and services company which has grown big on the import of Russian computers, is ready to expand its business into Western Europe.

Last August it began assembling Mael 2000 computers from Italy in SEEPZ, the Santa Cruz Electronic Exports Processing Zone in Bombay, and has so far built the first 25 of the 50 contracted.

SEEPZ is a "free trade area" close to Bombay's Santa Cruz airport. Work done there must be 100% for export, and companies setting up there benefit from low rents, fast Customs procedures with inspection being done on-site rather than at the airport or port, and good communications with the rest of the world.

Other companies manufacturing or assembling in SEEPZ include Burroughs and Syntime. Burroughs is currently manufacturing a new printer designed in France, for use around the world, and Systime is assembling systems and doing software development in connection with contracts in the Middle East.

Cunning design

"The Mael systems are being sold in Yugoslavia and the Far East," says Computronics managing director Piyush Singhal. "We have exported systems to the value of five million rupees — £280,000. We take to sub-assemblies and then assemble and test the systems."

The Mael 2000 is called the Ravi 2000 when built by Computronics. It is a desk-top microcomputer with software cunningly designed to get the most out of the Fairchild 8080-bit microprocessor, which cycles at a rather slow two megahertz.

It has a full screen, keyboard, two 280K-byte built-in floppy disc drives and is programmed in a micro-assembler. A tape unit and a 120 cpi printer are offered as options.

The agreement with Mael represents our first attempt to collaborate with Western European companies. We are writing a building construction software package on behalf of the Mael subsidiary in West Germany. The work will be done in Frankfurt and we are planning to open a Western European office in May to seek further contracts of this kind. The office will either be in Frankfurt, to be close to Mael, or in Brussels," says Piyush Singhal.

Computronics' main business is in operating computer bureaux in Delhi, Bombay and Allahabad. Importing computers

from the Soviet bloc on behalf of other Indian customers, and writing software under contract to the USSR.

All machines are IBM 360-compatible. The ES-1022 is rated equivalent to a 370/138 by Computronics. However, this may be optimistic as reports from France rate it as about the same as a 370/125. The ES-1010, made in Hungary, is a minicomputer based on the French CII Mitra 15, adapted to retain compatibility with other models in the ES unfiled range of the Comecon countries.

Memory Computronics rates its new ES-1033 as approximately equivalent to an IBM 370/148 (CW, February 28), but others have rated it below a 370/138.

The 1033 at Computronics has 512K bytes of main memory, and the processor cycles at 300 nanoseconds. It is backed by six 28-megabyte disc drives from Bulgaria, and six 800 bpi tape drives.

There is also a local VDU controller currently supporting four VDUs and the machine also supports two 800 lpm line printers and two 1,200 gpm card readers.

It is running under release 4.1 of the OS/VS operating system, which is equivalent to release 21.8 of OS/360.

The ES-1033 is a member of the Rjad-2 line, the second generation of the Comecon countries' unified range, and comes with semiconductor memory rather than core. Com-

"We have done more than 20 million rupees' worth of software for the Russians and we plan to do another 20 million this year," says Piyush Singhal, managing director of Computronics.

from the Soviet bloc on behalf of other Indian customers, and writing software under contract to the USSR.

The ES-1030 in Bombay has now been replaced with an ES-1033 (CW, July 6, 1978), and Computronics also has an ES-1022 in New Delhi and an ES-1010 at Allahabad in Uttar Pradesh. In addition it runs a second ES-1022 in Bhillai, Madhya Pradesh State, on behalf of Bhillai Steel.

All machines are IBM 360-compatible. The ES-1022 is rated equivalent to a 370/138 by Computronics. However, this may be optimistic as reports from France rate it as about the same as a 370/125. The ES-1010, made in Hungary, is a minicomputer based on the French CII Mitra 15, adapted to retain compatibility with other models in the ES unfiled range of the Comecon countries.

The ES-1010, made in Hungary, is a minicomputer based on the French CII Mitra 15, adapted to retain compatibility with other models in the ES unfiled range of the Comecon countries.

Report by Tim Palmer

Indian computer installations are totally unique, and plenty of them, as evidenced by the ES-1033 (in Cyrillic EC) bears a more than passing resemblance to that of an IBM 360.

putronics describes it as a very good, trouble-free system.

The company now wants the virtual storage version, called the ES-1035, which runs under the OS/VS/VS version of the operating system. This machine would probably go to Delhi, and the 1022 there would probably go to Allahabad. Demonstrating once again the sturdy independence of the Indians, Computronics' own engineers have almost doubled the main memory on the 1022 at Bhillai by using Indian-built add-on memory.

The ES-1033 is used for local time sharing services and batch

business data processing for outside clients, and also for software developments.

"We have done more than 20 million rupees' — about £1,250,000 — worth of software for the Russians, and we plan to do another 20 million rupees' worth this year," says Piyush Singhal. In addition, other users of Soviet computers imported by Computronics, Operations Research Group of Baroda, and the Administrative Staff College of India in Hyderabad, have paid for their computers with software developed under contracts from the Soviet Union.

COMPUTER WEEKLY is holding its Annual Ball on Friday, October 10 at the Royal Lancaster

Computer Weekly is holding its fifth annual Ball. Last year, nearly 700 people attended what has come to be regarded as the computer industry's big night out.

This year the Ball will again be held under the patronage of the British Computer Society. And proceeds will once more be devoted to a deserving cause associated with the computer industry.

So why not help us to help others? And at the same time enjoy a pleasant evening with friends and colleagues.

Perm/Contract Vacancies for Operators

WHY KNIGHT FOR OPERATORS?

- * Knight is part of BOC's Computer Services Division — large, stable and international.
- * We respond at once to requests for staff from companies throughout the U.K. and Europe.
- * We're highly experienced — with over 7,000 contracts completed successfully for more than 1,000 top European companies.
- * We manage projects — and handle JCL writing and documentation for major conversions, start-up of new installations and run-down of older ones.

PERMANENT VACANCIES

OPERATOR
Company requires mature person with experience on Burroughs mini or similar to operate B92. Days only.
Salary: up to £4,000 p.a.

OPERATIONS MANAGER
2 years' management or supervisory experience on NCR required.
Salary: c. £10,000 p.a.

OPERATOR
Publishing company require experienced IBM 370 or 380 Operator to operate 370/138 under DOS/VS with Power/VS. Altering weekly shifts.
Salary: up to £5,838 p.a.

OPERATOR
Experienced IBM Operator for new installation 370/148 under DOS VSE going over to 4341 in a few months. Good promotion prospects. Excellent company benefits.
Salary: up to £4,400 + 15% shift allowance.
Call Rachel if you are interested in any of the above vacancies or need some advice on career prospects.

U.K. CONTRACTS

PDP 11 RSTS/E
High-level Operations job — long-term contract. Call Joanne or Sue if you have RSTS/E experience or just want to find out more about contract operating.

ALWAYS RELY ON KNIGHTS — Sue Smyth, Rachel Martin and Joanne McKee are always happy to advise you on contract, permanent or freelance positions.

MYRIAD

PROGRAMMERS AND ANALYSTS

HERTS

£7,000-£10,000

Our client requires both Programmers and Analysts for their main Computer Centre servicing user requirements throughout the U.K. Developing systems for a wide range of applications offers job interest and the opportunity of employing both on-line and Database techniques.

For PROGRAMMERS offering:

- * at least one year's COBOL and/or RPG II experience

or ANALYSTS with:

- * the experience of one major project implementation and the desire to advance to interesting system designs

Our CLIENTS can offer:

- * a technically stimulating environment using some of the most advanced computing facilities available
- * Training where necessary on aspects of Database, on-line and distributive processing techniques
- * Competitive salaries and professional working conditions

A full range of benefits including relocation assistance, also support these outstanding opportunities.

REF: N1/1408

ANALYST/ PROGRAMMERS (JUNIOR ANALYSTS)

BEDFORDSHIRE

To £8,500

Our client requires additional Analyst/Programmers to develop a range of interesting systems.

Offering around two years' COBOL and some experience of analysts, the successful candidates will receive formal training to develop their skills and advance within project teams.

Although IBM experience in either a DOS or OS environment is desirable, consideration will be given to applicants displaying the potential to succeed in a technically stimulating installation.

Promotion prospects are geared to individual performance and application. Working conditions and benefits also contribute to make this a worthwhile step in your next career move.

REF: N2/1408

SOFTWARE PROGRAMMERS

MAJOR DEVELOPMENTS

READING

START: £7,000-£8,000

Our client manufactures and markets a diverse range of micro-processor systems for industry. Their success has led to a significant expansion and they are therefore seeking additional software programmers who will become engaged in a major new product development programme.

Most programming will be in ASSEMBLER and you will ideally have experience of working at device level. Awareness of Intel 8085/Zilog Z80/Intersil 6100 or PDP11 will also be useful.

The successful candidates will become involved at product design stage and will have the opportunity to see their ideas through development to large-scale production. Excellent conditions of employment are offered, including relocation assistance, together with good long-term career prospects.

REF: SW3/1408/CW

PROGRAMMERS TO PROJECT LEADERS

ON-LINE REAL-TIME DATABASE
UNIVAC 1100 & IBM370
DISTRIBUTED MINI's

* PROGRAMMERS to £7,500

* ANALYST/PROGRAMMERS to £9,000

* PROJECT LEADERS to £10,500

* TIMESHARING SPECIALISTS to £10,500

Based in HAMMERSMITH W6, our client is an international engineering and construction organisation. They make extensive use of large Univac and IBM hardware to develop systems using on-line and database techniques.

Additional Programmers, Analyst/Programmers and Project Leaders are required now at all levels to enhance the development team and to work on a range of major systems.

Timesharing Specialists will provide an internal consultancy service to timesharing users and will design special non-standard systems.

Excellent conditions of employment include: company pension scheme, free life assurance, flexitime, paid overtime and interest-free season ticket loan coupled with first-class career opportunities.

Dear Owen,
Just a note to say how pleased I am with the response I received to our latest advertisement placed with your journal.
At a time when there is not a great deal of movement of computer professionals, your journal has provided a very large number of replies from the best companies.
We used Computer Weekly for this purpose for the whole range of computer professionals and have been able to confidently recommend your publication to my clients. Moreover, the response quality is superb. I have always been able to find the right person for the job and the high standard of advertisement reproduction and the personal service you have always afforded me is a quality service to clients. It is an obvious fact that you are able to rely on a quality trade publication in our industry. I will be in touch with you very soon.
Yours sincerely,
David J. Peeling

We have been retained by a privately owned British Company to recruit a successful Sales Engineer, to market a versatile range of Graphical CAD/CAM products to various sectors of industry.

This position comes as a result of expansion and the launch of an exciting new division, together with a product dedicated to the CAD/CAM market area. Features of the product are proven reliability, flexibility and innovations by way of continuous research and development, guaranteeing a high level of sophistication to the equipment now and in the future.

Ideally, you should be resident in the Midlands, currently selling CAD/CAM systems, and be able to demonstrate the enthusiasm and commitment necessary to achieve the career progression inherent in the small, flexible and dynamic Company environment. Also practical knowledge of engineering and manufacturing techniques, together with an understanding of the marketplace is of paramount importance.

Remuneration is by way of a base salary of c.£9,000 plus a substantial guarantee, resulting in an above average first year earning package. A Company car and full expenses will also be provided.

For an immediate confidential interview, where you will be supplied with full Company information, contact:

CHRIS FRY ON 021-236 3781 (24 hour answering service)
OR 021-742 1992 (evenings and weekends)

Candidates are invited to submit a curriculum vitae where confidentiality is guaranteed.

DOS/VS...West London

A major 3031 installation in West London requires a Senior Systems Programmer and an Operations Supervisor to strengthen the existing team. The machine is currently operating under DOS/VS but will be upgrading to DOS/VSE and VM in the near future. Database facilities are provided by DL/I and the teleprocessing system runs under CICS.

Salaries are competitive, conditions of employment are excellent and the benefits package is most attractive.

Senior Systems Programmer c£10,500

Reporting to the technical support manager, you would be responsible for the evaluation of all software, including operating systems and commercial packages, and for the implementation of new systems software within the installation.

Previous experience must include Assembler, DOS/VS and CICS and some supervisory experience would be an advantage. Full training in new software techniques such as VSE, VM and VOLLIE will be provided.

Operations Supervisor c£9,000

Responsible to the Operations Manager for the control and co-ordination of the operations, support and job control departments, consisting of approximately 20 staff.

An in depth knowledge of DOS/VS and CICS is required plus previous operations supervisory experience. Training in VSE and VM will be provided as necessary.

This is a key role requiring a high degree of management skills complemented by a strong technical operations background.

- 27 Days Holiday
- Flexitime - 35 Hour Week
- Training in DOS/VSE VM
- Excellent Pension Scheme
- Relocation Package
- On-going Technical Training

Please telephone (24 hour answer service) or write to apply. Quote Ref: CW141-P

professionals seeking professionals

Data Processing Manager → One career step!

Analyst/Programmer ↑

Croydon

to £10,000

We can only seldom offer an opportunity such as this - in one career step to move from Analyst/Programmer to Data Processing Manager. However this is such a chance - with a manufacturing organisation, in the specialist field of electronic controls.

The experience required includes systems analysis, programming and preferably operations. You will either have a technical background with the ability to accept the responsibility of running your own show, or possibly already be a small installation manager. In the systems area both financial and production systems are to be implemented using the 2908/2904 hardware in an on-line environment. Programming languages used are COBOL, which you should have and FileTab/TABN, experience of which would be an advantage.

The department is small and the D.P.M. will be involved in analysis and programming, in addition to direction and day to day management and operation of the installation. Salary is to £10,000 and other benefits include 23 days holiday (25 days in your 3rd year), a pension and life assurance scheme, and a subsidised canteen. There will be a salary review based upon performance after the first six months with the company, and thereafter salary will be reviewed annually at the 1st January.

JBA

Sales Executive

London and Home Counties Package c. £20,000 + Car

A new range of mini computers of exceptional quality and technical advancement is about to be launched throughout the UK by a hand picked team of professionals. As a member of this team you will be responsible for opening, developing and supporting a specific area which you will go on to manage once you have established the product. A considerable amount of experience is expected including a sound commercial systems background with a minimum of 5 years in a mini sales organisation. A first class opportunity to attain that management goal with a potential market leader.

Contact: Brian Postles

Database Consultants

London & Europe £ Neg

One of the most highly respected consultancy organisations in the UK is recruiting top database people to work on various projects throughout the UK and Europe. A sound technical background is essential with emphasis on the analysts/design aspect. Full data analysis experience with intricate knowledge of large IBM installations would be a definite advantage. At top salary levels, appointees will be expected to contribute to the company's growth within a fairly short space of time, so a consultancy background would be favoured. Minimum salary of £11,000 + benefits (incl. car) can be expected for those with seven years experience in the d.p. industry.

Contact: Janet Chilvers

Project Leader

Central London £11,000

This internationally known software house, has an immediate requirement for an experienced person, who has a solid commercial background incorporating all aspects of accounting, design of real-time systems and database. Good knowledge of Honeywell hardware is essential, with experience of at least one other commercial machine. The appointee will be completely responsible for the project, and would be expected to have covered areas such as planning, scheduling, monitoring progress of systems and control of a approximately 10 staff. Excellent opportunities exist within the organisation, which will ensure good prospects and possible travel to Europe if desired.

Contact: Janet Chilvers

Technical Product Support - ICL/DEC

Thames Valley c. £10,000 + benefits

Our clients are the originators and marketers of a world-renowned range of Database and T.P. software projects. They are currently looking for good all round D.P. technicians to work in their Technical Support Group. Detailed knowledge of ICL and/or DEC software is essential while adaptability and commercial awareness is also required. Some European travel is involved, but without extended overnight stays. These extremely attractive opportunities offer first class career development in a highly professional and stimulating environment.

Contact: Margaret Stevens

Technical Designers

Middx. and Bedfordshire £8,500 - £11,000

A small, well established systems house has interesting and challenging opportunities for technically competent individuals. The company has an excellent reputation, of which they are justifiably proud as a consultancy specialising in mini/micro based developments in a number of areas including: Communications, Graphics, Simulation and Process Control. Ideal candidates will be graduates and be well versed in the architecture, capability and use of POP II, Data General, NOVA, GEI 4000, INTEL or ZILOG processors. Preferred languages are Assembly, Fortran and Cobol. A superb opportunity to join a 'blue-chip' international company, who can offer variety, quality of experience and tremendous career prospects.

Contact: Margaret Stevens

Scientific Programmer

Surrey to £9,000

Our client, a major supplier of various equipments to military establishments, wishes to recruit a scientific programmer to head the computer section of a simulation development project. The successful candidate will be responsible for setting up DP functions, including hardware and system software, design of computerised models, documentation and leading the initial team. Ideal experience would include at least 2 years FORTRAN with some exposure to ASSEMBLER, as well as good design knowledge of scientific applications. An excellent salary is supplemented by attractive fringe benefits.

Contact: Brian Postles

Senior Analyst/Programmers

Dorset £8,000 + Relocation

This well established Publishing House is planning to upgrade their System 3 in a System 38, and need two experienced people to lead project teams, whose function will be to design and implement new on-line commercial systems and to support existing systems during the hardware conversion. It is essential to have at least three years experience gained in a commercial d.p. environment, which should include a sound knowledge of RPG II and design and implementation of a major system. As this organisation are committed to long term development plans career prospects are very favourable.

Contact: Isabel Bruce

Mini Support Programmers

London £7,500

This internationally known mini manufacturer is marketing one of the most advanced computer systems in use today, and need experienced people to join their professional team developing various commercial applications covering banking, word processing and library circulation systems. A minimum of 2 years on-line programming experience preferably gained in a mini environment would be ideal, but consideration will be given to high calibre candidates with a sound on-line programming background. Training facilities and career prospects are excellent as this organisation firmly supports promotion from within.

EAST MIDLANDS SOFTWARE SALES

£16,000 p.a. + CAR

PROGRAMMERS AND ANALYST PROGRAMMERS

to £7,500 p.a. and
INDEX LINKED

Our clients, one of the most successful and professional organisations in the computer services sector, are expanding their operations in the East Midlands.

For SALES posts you should offer previous sales experience in the industry. You should be able to demonstrate in depth systems knowledge combined with the motivation necessary for a successful sales career. With the backing of a major International Group, you will market a comprehensive range of proven software products. These are internationally recognised and have already achieved well in excess of £1,000,000 in sales.

As a PROGRAMMER or ANALYST/PROGRAMMER you will have the opportunity to develop very broad skills and rapidly advance your career. Working on the wide range of commercial applications you will be involved in new development on real-time mini-computer projects. Current work involves ICL IBM Small Business Systems and Philips hardware. You should offer at least 18 months' commercial experience.

The salaries offered are highly competitive and INCREASE automatically through the year with inflation. The area offers attractive low-cost housing and where necessary, relocation assistance will be considered.

Male or female candidates should contact Patrick Convey quoting reference number: CW281.

CPC

COMPUTER USER LIAISON OFFICER

The Northern Division of the UKAEA has a vacancy in the Central Computer Services Section at Risley for a Computer User Liaison Officer. The work involves assisting staff from the whole of Northern Division and BNFL with the ICL 2980 computer at Risley.

Remote batch and interactive terminals are used for a wide range of scientific, engineering, commercial and managerial applications. The successful applicant will help staff who have problems in the use of the computer, advise users about the facilities available, recommend improvements to the operational procedures and facilities and provide occasional training courses for new and existing users.

Applicants should have an Honours Degree in a scientific or engineering subject or Corporate Membership of a Senior Professional Institution. In addition, several years experience as a user of a large computer system or of providing and supporting a service on such a system is necessary. An understanding of System Control Languages and high level languages including FORTRAN and COBOL is required and experience on an ICL 2900 System using VME/8 would be an advantage.

Appointment will be either as a Professional and Technology Officer Grade 1 or a Senior Scientific Officer and the salary will be in the range £6,780 to £10,915. Applications are invited from both men and women. The appointed Officer will be based at the UKAEA Northern Division Headquarters at Risley, Warrington, Cheshire, although visits to other UKAEA and BNFL sites will be necessary.

For an application form please write — no stamp needed — to Staff Office, United Kingdom Atomic Energy Authority, Recruitment Section, Northern Division, FREEPOST Risley, Warrington, WA3 8AT, quoting reference 8 2274/CW

IMS SPECIALIST

Holland

£20,000 + p.a.

For a one to two year assignment providing support in all aspects of IMS DB/DC to an application development group. This group is responsible for a Division which has limited IMS experience, and so duties will include advice on design, setting up development standards and procedures, plus trouble-shooting on problems which arise. Candidates should have a solid IMS background, and experience in a DBA role could be helpful, plus the ability to communicate effectively with development staff and DB/DC support groups in the main Data Centre. As English is widely spoken there is no requirement to speak Dutch.

For further details, please telephone or write to Jim Shaw at our UK office, or call during evenings/weekends on 0950 24546.

**The European
370 Specialists**

97-73 Park Street, Cambridge, Surrey GU16 3PE. Tel: 0276 26845. Telex: 858062.

ASSISTANT SHIFT LEADER

£7,264-£11,883 including 12% shift allowance

The post is based at the Authority's Computer Services Department in central Bedford working with an ICL 2970 computer using the VME/8 operating system. The post will involve working weekly, 40 hours per week, on a shift basis (days and evenings only) — no night shift, standing in for Shift Leaders and also providing cover at Divisional installations as required.

Applicants should have several years' experience of large-scale computer operations including some supervisory responsibility.

Applicants should be available from the Regional Personnel Officer, Yorkshire Water Authority, West Riding House, 87 Albion Street, Leeds LS1 1BA (Tel: Leeds 48201; Ext. 280) to whom they should be returned by 21 August 1980.

Recruitment

in Informatics

Communications & Telephony

E.E.C. Package c £20K

System X has been universally recognised as the system not only for the 80's but possibly for the foreseeable future. Such is the respect that Continental European hold for System X that many of the communications and telephony specialists who have developed the software are now in great demand. We are able to offer several attractive career positions in Mainland Europe. Our client, a leading

Total Systems Supplier to European P.T.S. has an immediate requirement for Communications Specialists with current involvement in public telephony systems and digital networks. Of course, particular hardware exposure is less relevant than the applications knowledge but familiarity with PPTT VAX 11/78 or Intel 8085 will be a distinct advantage. Ref. L/33/A

Systems & Business Analysts

City Area: Salary to £11.5K

Unlike most firms, this major shipping company recognises the crucial importance of its D.P. Department in the efficiency of its commercial operations. "State of the art technology," substantial development work and above average salaries are, therefore, notable characteristics of the positions they are able to offer. Systems Analysts should demonstrate supervisory experience gained during the development

of at least one medium to large computer system, preferably utilising CICS and IDMS. A further requirement exists for Business Analysts with a successful record in managing small project groups and who possess the self-confidence and ability to help formulate the Company's Systems Strategy stretching into the mid-1990's. Ref. L/33/B

Mini & Micro Software

Holland: Salary to £16K

An internationally renowned Systems and Software House with a successful and expanding Dutch operation is seeking additional Consultants, Team Leaders, Analysts and Programmers. Applicants should offer in-depth knowledge of an Assembler language on any mini or micro computer. Of particular interest will be those who have specialist expertise in the field of

Communications, Networks, Message Switching or Process Control. Successful candidates will work in small specialist project teams both in-house and on various client sites throughout Holland. Excellent relocation and accommodation allowances will be paid in addition to an above-average salary. Ref. L/33/C

Financial Consultants

Berkshire + Benelux: Salary to £20K

Our client has its European Headquarters in Brussels and a Regional Office close to Heathrow. The Company's Financial Management Systems have been very well accepted in Europe and consequently additional personnel are required to act in both pre- and post-sales environments. Successful candidates should preferably be aged 27-35 years and offer Banking (Retail or Merchant), Stockbroking or Accounting experience with a large scale IBM user or

an IBM compatible systems supplier. Analytical and design skills are essential for the Consultancy positions whilst two years' post-graduate programming experience is ideal for the Programming posts. All positions will involve a degree of national and international travel. In the long term there may be the opportunity to take up a permanent position in U.S.A. with the parent company. Ref. L/33/D

Telecoms - Senior Designers

N.W. London: Salary to £11.5K

A renowned European Systems Supplier and Consultancy within close proximity to extensive motorway and rail facilities is seeking several Senior Designers with substantial experience of telecommunications, networks and multi-tasking techniques. Successful candidates will preferably be aged 25-30 years and have a minimum of five years' programming systems

development/implementation exposure in either a commercial or financial environment. These positions represent an outstanding opportunity for those keen to enhance their technical skills. There will be some travelling (although not extensive) to the Company's Continental operations. Ref. L/33/E

Cobol Programmers

W. Home Counties: Salary to £9K + Benefits

Outstanding opportunities have arisen for COBOL Programmers in the Software Development Headquarters of one of the world's leading mini-computer manufacturers. Successful applicants will be aged 25-30 and have at least 3 years' on-line COBOL programming experience gained on any mini-computer. Preference will,

however, be shown to those candidates with exposure to IBM System 3/32/34/38. As a member of a small project team you will be engaged in the development of transaction-oriented software. Rapid career progression in this expanding company is assured for applicants able to demonstrate leadership qualities. Ref. L/33/F

Software Trainers

Hampshire Coast: Salary to £10K

A leading manufacturer of mini-computers for both scientific and technical applications seeks several Software Trainers and Instructors for its recently established Hampshire office. Work content will include the training of both existing and prospective customers in D.P. techniques and the Company's Software products. Education takes the form of product demonstration seminars, workshops and

courses "on the job" tuition. The development of software courses in areas not so far covered by the Company will form an essential and integral part of the post. Our client prefers candidates who have previously programmed in either BASIC or Assembler. Previous lecturing or training experience is an obvious asset. Interviews can be arranged locally or in London. Ref. L/33/G

working on a variety of commercial systems in a
project team environment.

Systems are run on an IBM 370/146 mainframe,
and a project to select minicomputers for Group
Subdivisions is already underway.

Applicants, male or female, should be aged
between 25 and 35 and ideally have experience at
small machines as well as IBM COBOL under OOS
VS or QSVS, or total base under OOS.

We can offer an attractive salary reflecting the
seniority of the position, flexible hours, subsidised
staff restaurant and 22 days' holiday per annum.

Please apply to: Personnel Officer, Berac Group
Ltd., Berac House, 1265 High Road, Whitehaven,
Cumbria, N20 0EJ. Telephone: 01-448 1313.

Data Processing Manager

Newspapers South Coast

An exciting career with a successful provincial daily newspaper.
Involvement in all aspects of the business and work of a strong technical
interest are three features of this post which will have wide appeal.
Portsmouth and Sunderland Newspapers is a profitable group which
operates one of the most advanced computer systems in the industry.
It has recently installed two DEC PDP-11/70 computers which now
with some 50 terminals, service both commercial and production
requirements. A DP Manager is sought who will take charge of the
Portsmouth operation and allow the present Manager to undertake
wider responsibilities. There will be a strong emphasis on the further
development of systems and on ensuring user satisfaction. Candidates
should have management experience of a large time sharing system; a
background in newspapers would be helpful but is not essential. Salary
will be negotiable around £10,000 with good fringe benefits.
Location: Portsmouth.

Initial interviews are conducted by PA Consultants. No details are
divulged to clients without prior permission. Please send brief career
details or write for an application form, quoting the reference number
on both your letter and envelope, and advise us if you have recently
made any other applications to PA Personnel Services. Men and
women may apply.

PA Personnel Services
Hyde Park House, 205 Knightsbridge, London SW7 7LS. Tel: 01-235 5050. Telex: 27871

Feeling Blue?

ANALYSTS West of London to £9,500

Outstanding modern facilities house
the U.K. head office of our
international blue chip organisation.
We've been blue for years and have
enjoyed and prospered with every
minute, give or take a few. We
established our data processing
facilities fifteen years ago and have a
continuous development programme
to cater for our many locations in the
U.K.

We have recently relocated our D.P.
department to new facilities, with
new equipment, and have
commenced an ambitious
redevelopment programme. We now
require additional experienced
analysts who wish to be involved in
all aspects in the development and
production of systems.

PROGRAMMING TEAM LEADERS

WEST MIDLANDS £7,500+ CAR

Our client, a minicomputer turnkey systems house, wish to
expand their team of professional staff.

They seek experienced and mature senior programmers, with the
ability to lead and manage a team of staff, and to take respon-
sibility for the success and profitability of their projects.

Ideally, you should be able to demonstrate a background in
minicomputers, and have experience of DEC PDP operating
systems and languages, however other relevant experience will
be considered. You will be seeking to move to an organisation
where your programming skills will be rewarded.

Projects are carried out on a turnkey basis, and you would be
totally involved from initial estimating up to installation and
handover to your client.

Future prospects within this fast growing area of the market are
exciting, and our client is ideally placed to take advantage of the
opportunities.

General conditions of employment include six monthly salary
reviews, service awards, pension, sickness and BUPA schemes,
five weeks' holiday and provision of a company car.

To discuss these opportunities, please contact Mike Heselen, ref.
CW292.

Analyst Programmers & Programmers Birmingham

to £8,750 + BONUS + RELOCATION

COBOL, 3031 + AP, 3033, 8100, VSP-C, IMS DB/DC, CICS VS

My Client, a leader in the food processing industry, has asked me to find experienced men and women with a high level of education for several extremely rewarding positions. These involve the use of some of the most sophisticated development techniques and extensive on-line and interactive systems on new IBM minis and mainframes.

A massive commitment has been made to -

a) provide a factory distributed processing system with 240 shop floor terminals, in which 18 new systems are to be developed and implemented within the next three years.

and to

b) expand the Management Services computing department which acts as a bureau and centre of expertise for my Clients' subsidiary companies throughout the UK and overseas. Successful applicants will therefore be given the opportunity to develop their skills and to widen their experience with the greatest variety of systems and applications in this very forefront of new computing technology.

Recruiting for Clients VLI group

My Client also offers a structured career in which formal in-house and occasional external training will be given, together with career progression according to merit.

Your experience need not have been gained in an IBM environment. More important is that you should have good solid experience, have a high regard for professionalism and be able to demonstrate real potential for attaining more senior positions.

Please write to me, Digby A. Dyke at the address below, or telephone me at my office on 021-643 8501

Please quote reference No: DP/J315/C14/08.

FIELD SERVICE ENGINEERS

C. £5.8K + CAR

Infotron Systems Limited, a major manufacturer of Data Communications equipment, requires Field Service Engineers for the Greater London Area. Applicants, who may be of either sex, must have experience in Data Communications and/or computer engineering. Qualification to H.N.C. level desirable, but not essential. Full product training will be given.

Write or phone for application form to:
Steve Kay, Field Service Manager, Infotron Systems Limited, Systems House, Poundbury Road, Dorchester, Dorset, DT1 2PB. 0301 86016.

UNIVERSITY OF LONDON COMPUTER CENTRE

SYSTEMS PROGRAMMERS

The University of London Computer Centre provides a national Computer Service to Universities throughout Southern England. The Centre is equipped with a Data 7600, 8800, 8400, and Cyber 72 computer and supports a large communications network of remote batch and interactive terminals. A development programme is under way which will include replacement of the existing mainframes in the early 1980s. The Centre has vacancies for experienced systems programmers to work on the development of services for the 1980s. Initial duties will be related to programming, equipment and support for relevant operating systems. Candidates are expected to have several years of operating systems experience on modern, high-performance computing systems. Academic qualifications to degree level will be required. Experience in project leadership would be an advantage. Remuneration will be according to age and experience within the range £7,815 to £11,224 (under review) including London weighting. Further details and application forms are available from the Assistant Secretary, UCC, 20 Gullford Street, WC1H 1DZ. Telephone 40618400.

With our Contracts, you won't have to read between the lines.

Some contract assignments turn out to be a great deal different than the job that was glowingly described to you by your consultant. Small details keep changing and in the end the job doesn't even resemble the one that you originally chose.

Knight Programming Support Limited guarantees that as one of our contract staff you will never be assigned to a job which doesn't perfectly match your skills and experience.

Listed below are just some of our current vacancies but if you can't see one for you, contact us anyway, we will send you our free brochure outlining our services. We are sure we can be of help.

* PROGRAMMER £280

ICL 7900 operating under COS New Assembler Language/CORAL. Must have communications experience, involves documentation. Immediate start, 6 months' contract. North West.

* SYSTEMS DESIGNERS £450

ICL 2970 experience. VMEB COBOL. Large scale project. Long term contract, starting soon. North West.

* TUTOR £300

IBM 360/70 Assembler plus some COBOL. Outgoing personality to assist students with coding and run course. Immediate start, initial 2-month contract. North West.

* ANALYST/ PROGRAMMER £260

IBM 3032/VSPC. Implement commercial systems, on-line experience essential. Immediate start. Initial 6-month contract. Sootland.

Data Processing Manager → One career step! Analyst/Programmer ↑ Croydon to £10,000

We can only seldom offer an opportunity such as this - in one career step to move from Analyst/Programmer to Data Processing Manager. However this is such a chance - with a manufacturing organisation, in the specialist field of electronic controls.

The experience required includes systems analysis, programming and preferably operations. You will either have a technical background with the ability to accept the responsibility of running your own show, or possibly already be a small installation manager. In the systems area both financial and production systems are to be implemented, using ICL 2903/2904 hardware, in an on-line environment. Programming languages used are COBOL, which you should have and FILETAB/TABN, experience of which would be an advantage.

The department is small and the D.P.M. will be involved in analysis and programming, in addition to direction end day to day management and operation of the installation. Salary is to £10,000 and other benefits include 23 days holiday (25 days in your 3rd year), a pension and life assurance scheme and a subsidised canteen. There will be a salary review based upon performance after the first six months with the company, and thereafter salary will be reviewed annually at the 1st January.

PLYMOUTH POLYTECHNIC

Computer Centre

SYSTEMS AND OPERATIONS MANAGER

Salary: £7722-£8574 (under review)

Applications are invited for the above post which has been created following the purchase and installation of the Computer Centre at the Polytechnic of a PRIME dual 560 system. The successful candidate will be responsible for the work of a small team of systems programmers and also responsible for the overall supervision of Datacoms including data preparation. Proven experience in systems work is required together with some experience at operations. A working knowledge of telecommunications in support of computing services in principle and practice would be a considerable advantage.

PROGRAMMER

Salary range: £4681-£7077 (under review)

Applications are invited for a post as programmer within the given salary range. The Computer Centre now provides a considerable range of services to students, staff and administration based on a PRIME dual 560 system and the programmer would be required to write programs associated with any of the work of the Centre. Previous experience is desirable and an interest in graphics applications would be a further advantage.

Application forms for the above posts to be returned by Friday, August 29, 1980, can be obtained with further particulars from the Personnel Office, Plymouth Polytechnic, Drake Circus, Plymouth, PL4 8AA.

Senior Programmers to £8.5K + profit share

Programmers to £7.5K + profit share

CITY • COBOL

Dun & Bradstreet is an international group specializing in information about business - credit reports, directories, mailing lists and market analyses. Other services include commercial collection and specialist information on taxation.

During the next five years, all of D & B's services will be computerised, building up a comprehensive database on U.K. businesses. A full accounting and management information system will also be implemented for the U.K. group.

The present Management Services Division, set up in 1979, is expanding to meet these requirements. The computer, soon to be upgraded, is an IBM 370/145 operating under DOS/VSE. Programming is mainly COBOL. A database management system will be installed by December 1980, and the first on-line applications will be implemented in 1981.

Programmers should have a minimum of 18 months' COBOL experience. Senior programmers should have three to five years' experience. A knowledge of Assembler would be an advantage for the senior posts. As the division expands, there will be opportunities to move into analysis or systems programming.

Benefits include L.V.'s, relocation assistance where appropriate and season ticket loans. The division has a substantial training budget.

Contact Ian Fyle on 01-247 4377.

MIDLANDS AND NORTH

Systems Analysts

North West

Opportunities exist for experienced SYSTEMS people within one of the most advanced installations within the region. The company is highly respected and provides excellent scope for career progression and first class training facilities.

Applicants should have a minimum of 3 years commercial systems experience preferably with a period in a large main frame environment. Though not essential, familiarity with on-line systems would be an advantage. A secure organisation, good salary package and, where appropriate, generous relocation expenses.

Contact: Bev Stevens

Service Engineer - Micro's

Glasgow, Manchester, Birmingham, Chesham

c. £7,500 + car

A rapidly expanding company operating a commissioning and maintenance service to a wide variety of micro users throughout the UK is currently seeking to increase the level of field support and requires experienced SERVICE ENGINEERS.

Applicants should have computer service engineering background. Previous experience of micros is NOT essential as training will be given as appropriate.

Contact: Mike Gaskin

Analyst/Programmer

West Midlands

£7,500

Our client is an acknowledged leader in its field and produces a wide range of high and low technology products. The Systems Development team now has a vacancy for an Analyst/Programmer to assist in the development of a range of systems involving on-line, real time and database techniques.

Applicants with at least 2 years computing experience should be proficient with COBOL. Familiarity with a Univac 1100 environment - notably TP and DMS1100 would be advantageous.

Contact: Bev Stevens

Birmingham

Our client is one of the most respected and notable companies within the area. The organisation uses IBM main frame equipment, mini-computers and is now embarking on a new distributed processing project. Vacancies exist at various levels but the principal opportunities are:

Project Leader

up to £8,700

Applicants aged at least 27 should have a good education combined with at least 6 years computing experience. The ability to lead a team is essential and a technical, rather than a systems bias will be particularly advantageous.

Applications Programmers

c. £7,000 - £8,000

Vacancies exist at different grades according to experience. Applicants should have a good education and a minimum of 2 years COBOL programming experience.

Systems Programmer

£7,500 - £8,000

Applicants should have at least 2 years programming experience combined with practical knowledge of IBM systems software MVS and JES 2. Some experience with IBM 8100 systems is particularly relevant but not essential as training will be given where necessary.

Join us in Switzerland...

"£15,000-£25,000 p.a. (U.K. equivalent) package"

Expansion in Europe constantly creates new opportunities for Computer professionals to display their individual and team abilities.

At CSC, the world's largest software systems company, we provide a unique spread of high level consultancy and technical services in many fields of computer technology; for example communications, systems technology and applications software.

With new contracts and exciting prospects, CSC will shortly be establishing a Swiss office and will need staff with good and proven computing skills, who can quickly contribute to the successful operation of this new venture, providing further strength to an established management team.

We are primarily recruiting for SENIOR SYSTEMS DESIGN/DEVELOPMENT STAFF, and also have requirements for TEAM LEADER DESIGNERS. Applicants should have specific software test, quality assurance or project management/control experience.

Appointments will be made on a permanent overseas status basis and applications are invited from those fluent in German, with a relevant degree, and at least three years' appropriate software experience, preferably in real-time telephony/telecommunications applications.

Salaries, associated benefits and prospects for those interested in living in the beautiful country of Switzerland on single or married status are competitive. Applications should be addressed to Peter Murley, CSC UK Computer Sciences Company Limited, 38 Savile Row, London W1 or telephone (01) 439 4511.

...and leave the rest behind.

Computer Auditing

2 POSTS—1 in London—£9,891-£10,668
1 in Reading—£8,883-£9,868

Currently the Authority operates two IBM 370/148's which support a large teleprocessing network and an ICL 1904S providing a bureau service to the Authority. It is planned to develop a wide range of new applications for implementation on PRIME computers soon to be acquired.

F.P.T. audit specialists are needed to carry out the full range of computer audit activities, especially the review of new applications, the examination of the operation and security of the Authority's computer installation and the development of audit software.

Two vacancies have arisen; one being based in London and the other in Reading, although both post-holders will be expected to visit other offices within the area of the Authority. Candidates should be experienced computer analysts/programmers or qualified accountants with a sound practical knowledge of computing gained either in the Public or Private Sector. The ability to articulate constructively and communicate effectively is considered essential.

Benefits include a superannuation scheme, generous holidays, staff canteen, good social and sporting facilities. Applications giving full details of qualifications and experience, together with the names of two referees, should be submitted to the Director of Finance, Nugent House, Vauxhall Road, Reading, Berks, by the 22 August, 1980.

SHIFT CONTROLLERS

Up to £11,332 p.a.
(incl. Shift Allowance)

ALTRINCHAM, Cheshire

Due to the re-organisation and continuing expansion at our Computer Services Department, based at Regional Headquarters in Altrincham, we are seeking for experienced Managers/Supervisors who will be responsible to the Operations Officer for the control and operation of all on-line computer equipment and associated activities for one of three rotating shifts.

Outside normal working hours you will be responsible for the overall control of activities carried out within the computer centre.

Applicants must have considerable Managerial/Supervisory experience and ideally, a sound understanding of computer operations.

The work involves rotating shifts (Monday to Friday only) for which a 17% shift allowance is paid.

Our employment package includes generous removal expenses (where appropriate), subsidised staff restaurant, good sports and social facilities, free personal insurance, at least 4% week/holiday pay, plus the opportunity of a secure future in a successful industry.

Interested? Then telephone for an application form and return it quoting reference G/732/CW not later than 29th August, 1980, to:

Specialist Computer Recruitment Ltd

As part of a Multi-National Organisation, which has been established for well over a century, our Client has built up a reputation and impressive Client base throughout the world, spending considerable time and investment on new technology, software back-up and support services. They have been quick to realise that due to the current economic climate this is the time to increase their current efforts in penetrating a volatile market.

Their continuing expansion plans, now necessitate the need to recruit two types of Sales Executive to further enhance their penetration of the UK market place.

- Ideally you will have between one and two years successful sales experience within the computer industry selling equipment with a unit value of between £8,000 and £15,000.
- Three to four years experience in selling small business computers in a competitive environment whereby the unit cost will be c.£20,000 to £30,000.

You will now be looking for an International Company who can offer you large company benefits, excellent on-going training, a sophisticated product range and security at a time when this is paramount to any individual seeking alternative employment.

The successful Candidates will be part of a National sales team whereby our Client gives full support and training on territory, which is second to none, along with very realistic quotas which should earn the two types of individual £12,500 and £15,000 respectively for an on-target performance.

For further details please telephone, in the first instance,
PAUL PEARCE ON 021-236 3781 (24 hour answering service)
OR 021-308 4908 (evenings and weekends)

If you prefer, Curriculum Vitae would also be welcome.

London 01-835 0671, 3 Mandeville Place, Wigmore Street, London W1M 6LB

Hardware/Software Specialists

Modular Computer Services is a world leader in the manufacture and provision of mini computer systems to the industrial and scientific market. In particular we specialise in process control and communications. Over the last eighteen months we have doubled our installed base in Europe and anticipate similar substantial growth over the next eighteen months. To enhance two of the groups which provide technical expertise to the field, we are looking for suitably qualified staff in the following areas:

Special Systems Consultants £8,000—£11,000 p.a.

The special systems group is responsible for the design and implementation of non-standard systems, either HARDWARE or SOFTWARE, and many of the projects involve real-time operating systems and communications. It is a dynamic environment which requires individuals capable of devising solutions to suit customers' needs, where the highest levels of reliability and performance are critical. Suitable applicants will have in-depth experience, either hardware or software or a combination of both, on sophisticated computer systems. Of specific interest is software experience of operating systems, mainframe front-ending or emulators, and hardware experience in the design or development of digital equipment, particularly in communications systems.

Product Support Analysts £9,500 p.a. + car

The Product support group provides the highest level of technical support to customer service organisations throughout Europe. Their responsibilities include the introduction of new products to the field, together with the recommendation and participation in training programmes. In addition, as software specialists, they will implement maintenance philosophies and provide support in the solution of complex problems. Limited travel in Europe will be required. Suitable applicants will have detailed experience of resolving technical software problems, particularly on sophisticated systems such as real-time operating systems, systems software and communications.

Modcomp benefits are highly competitive including a non-contributory pension, free life assurance and BUPA. If you are able to actively contribute to our success then contact
SUE HAMPSON on 0734 788711 or send a detailed resume to MODCOMP, MOLLY MILLARS
LANE, WOKINGHAM, BERKSHIRE.

MODCOMP

MYRIAD COMMUNICATIONS SYSTEMS INTERNATIONAL SUPPORT

If you are a GRADUATE with 18 months/two years' in industry behind you, you may now feel that the time is right to broaden your experience and to make a positive move into a position which will really stretch your established skills. As a world leader in its field our client is well placed to offer a demanding career in a rapidly expanding sector of the computer industry.

FULL TRAINING to the highest standards will be provided if you can offer the basis on which to build. You will then become responsible for providing a high-level of specialist support and consultancy regarding a number of new products, shortly to be announced, throughout the U.K. and Europe.

Your background:

- ★ Relevant numerate degree
- ★ Digital Electronics design
- ★ Control Software development
- ★ Micro-processor application
- ★ Data communications protocols

RPG11 Analyst Programmer

Develop On-Line Systems on an IBM 38

UECL design and manufacture high technology components for a variety of applications in the electronics industry.

Already a world leader in this highly competitive market, we're now about to embark on an intensive programme of planned expansion which creates the need to appoint an RPG11 Analyst Programmer to join our experienced DP team.

With UECL your main task will be the development of new on-line systems. To help you achieve this, we plan to upgrade our present IBM System 3 Model 12 installation to the exciting new IBM System 36. Full training in RPG11 will be given.

In terms of rewards, you'll find UECL hard to beat.

We'll offer you a substantial initial salary, and we'll back it up with a full range of attractive benefits - including paid overtime.

If you're confident that you have the experience to develop new on-line systems, make a telephone charge call to David Silsbury our DP Manager any evening this week on High Wycombe (0494) 8800.

Alternatively, contact John Fordham, our Personnel Services Manager, at the address below to arrange an immediate interview.

Ultra Electronics Components Limited,
Farnborough Road, Loddon, High Wycombe, Bucks.
Tel: High Wycombe (0494) 88233.

Variety

IN SYSTEMS CONSULTANCY COMES NATURALLY WITH US

It's not just a question of anything for a change. Systems Consultants who join us here at Sperry Univac find we have the projects and the philosophy that can add a lot of spice to a professional's life. If you're good we're glad to see you, and put ourselves out to enhance your career in a variety of ways.

At present we are engaged in a five year £ multi-million project in automated office systems.

We now need 4 people who will spend the majority of their time in on-line development, working principally with COBOL, though we would expect you to display sufficient agility to meet the demands that innovation and variety require.

SPERRY UNIVAC

We'll listen to you—because you're our future

You must have 5-10 years comprehensive experience including database techniques and be able to communicate effectively with all levels of staff.

Based in our North London headquarters we have no doubt that you will find the conditions and atmosphere as stimulating as the variety of challenge. And the range of opportunities for career development will follow naturally.

For more information about this exciting opportunity, please telephone Maureen Peachey on (01) 961 6444 or write to her at Sperry Univac, Brentfields, Stonebridge Park, London NW10 8LS, quoting reference CW 1683.

An exceptional opportunity to join a rapidly expanding group of microcomputer sales outlets

DISTRICT MANAGERS FOR CURRYS MICRO-SYSTEMS - £8,000/£9,000 + CAR + PERFORMANCE-RELATED BONUS

We expect our new district managers to earn well into five figures by taking responsibility for management of our sales efforts in live regions of the country: The North, The North West, The Midlands, London, The South West.

The Currys Group is setting-up specialist, export microcomputer sales outlets within Currys Shops. We've called them "Micro-C".
As well as branch salesmen there will be field sales executives.
The District Managers will supervise these sales functions, motivate their staff, implement reporting systems and share in success through the performance-related bonus.
They will report to our regional sales managers.

Experience in sales management, sales experience in computing and knowledge of business accounting and EDP is the background we require of these key executives who we think will be in their mid-thirties.

If you are looking for real career prospects with your next move, please write, enclosing a full C.V. to:

DISTRIBUTED SYSTEMS LIMITED RECRUITMENT DIVISION

Due to our expansion in the life assurance sector D.S.L. require:

LIFE ASSURANCE CONSULTANTS/ANALYSTS

We offer highly attractive rates with likely extensions to initial period

WE REQUIRE:
1) Competence in dealing with users at a business level.
2) Ability to relate to development staff at a design level.
3) Actuarial or valuation experience would be an advantage but is not essential.

THESE ARE INTERESTING ASSIGNMENTS IN THE IMPLEMENTATION OF A MAJOR ON LINE SYSTEM

PLEASE ASK FOR DAVE PALMER OR JIM HOWLEY
70 Borough High Street, London SE1 1XF
Tel: 01-403 3468 1668

We have been retained by our Client to recruit highly successful Sales Executives for their specialist Point of Sale and Insurance Divisions, to market a highly versatile range of turnkey solutions across a broad spectrum of commerce.
As a young and dynamic, privately owned British Company, their growth rate has exceeded all expectations, truly establishing them in this highly competitive market place. Thus offering to those who can demonstrate the commitment and enthusiasm, an excellent progression.

Sales Executives - MIDLANDS

c £16,000

POINT OF SALE

This solution has been specifically designed for the cash and carry and wholesale market place, where its features are flexibility, reliability and sophistication at the right price.

Ideally, you should be currently selling computer systems, well versed in POS and distribution, and able to demonstrate an above average knowledge of this market area. A successful track record to-date is essential.

Remuneration is by way of an excellent base salary, negotiable guarantee, plus a commission scheme designed to give an above average and realistic earning package. A company car and full expenses are also provided.

c £14,000

INSURANCE

This is a unique, low cost computer solution for the Insurance Broker. Devised by Insurance and Computing Experts offering reliability, flexibility and competitive price as its main features.

You will probably be employed by a Manufacturer of small business systems and be involved in their sales operation to the office environment. A knowledge of Insurance practices or Broking would also be desirable but is not essential. (Also someone from within the Insurance or Broking area would be considered, as sales training is available). All candidates must be able to demonstrate a successful track record to-date.

Remuneration is by way of an excellent base salary, negotiable guarantee plus a commission scheme designed to give an above average and realistic earning package. A company car and full expenses are also provided.

For an immediate and confidential interview, where you will be supplied with full company information, contact:
CHRIS FRY ON 021-236 3781 (24 hour answering service)
OR 021-742 1992 (evenings and weekends)

Candidates are invited to submit a Curriculum Vitae, where confidentiality is guaranteed.
